

Amendments to the Specification:

Please insert the following text at page 1, line 1, after the title:

RELATED APPLICATIONS

The present application is a 35 U.S.C. §371 national phase application of PCT International Application No. PCT/EP2004/001923, having an international filing date of February 26, 2004, and claiming priority to European Patent Application No. 03006941.3, filed March 26, 2003, the disclosures of which are incorporated herein by reference in their entireties. The above PCT International Application was published in the English language and has International Publication No. WO 2004/086733 A1.

FIELD OF THE INVENTION

On page 1, in line 6, insert the following new heading:

BACKGROUND OF THE INVENTION

On page 2, before the first line, insert the following new heading:

SUMMARY OF THE INVENTION

Please replace the paragraphs at page 2, lines 1-25, with the following amended paragraphs:

According to embodiments of the present invention, ~~The object of the present invention is therefore to provide~~ a clamshell-type mobile terminal for a wireless communication system, with a lower casing ~~comprising~~ comprises a keypad with input key, an upper casing comprising a display, and a hinge means connecting the lower and the upper casing so that the lower and the upper casing can be folded onto each other, which allows a maximum area of the lower casing to be used for input keys and particularly to place input keys very close to the hinge means.

~~The above object is achieved by a clamshell-type mobile terminal for a wireless~~

~~communication system according to claim 1.~~ The clamshell-type mobile terminal according to the present invention ~~comprises~~ may comprise a hinge means which is located and arranged so that in an opened or unfolded state, the lower casing lies above the upper casing enabling an easy access to input keys located close to the hinge means on the lower casing. Hereby, the lower casing does not lie on top or is folded on the upper casing, but is arranged in a plane above the plane of the upper casing assumed that the upper casing and the lower casing unfold to an angle of 180° between them. In other words, even if the clamshell-type mobile terminal opens into an angle of less than 180° , in reality, assumed that the upper casing and the lower casing, on the basis of the actual construction of the hinge means, were opened into a position where they include an angle of 180° , they would not lie in the same plane, but the lower casing would be located in a plane above the upper casing. The expression "above" hereby means in a plane distant from the display on the inside of the upper casing or skywards when the mobile terminal is held in a normal position in which the keypad and the inner display both face towards the sky.

On page 3, in line 9, insert the following new heading:

BRIEF DESCRIPTION OF THE DRAWINGS

On page 3, in line 24, insert the following new heading:

DETAILED DESCRIPTION OF EMBODIMENTS OF THE INVENTION
